# 3rd Annual Academic Conference of the Professional Committee of Venous Diseases, China Association for Promotion of Health Science and Technology

## *Invitation Letter*

Dear Professor **Takahiro Imai**

Venous diseases represent the most prevalent category of vascular surgical conditions, accounting for approximately 60% of all vascular surgery cases. With population aging and the widespread adoption of sedentary lifestyles, the number of patients with chronic lower extremity venous diseases in China has exceeded 120 million, and the onset is showing a younger age trend. From mild varicose veins to refractory venous ulcers and post-thrombotic sequelae, these conditions impose a sustained and substantial burden on public health and the healthcare system. Promoting innovation in diagnostic and therapeutic techniques for venous diseases and implementing standardized clinical pathways are currently the core research and practical focuses in the field of vascular surgery.

To further advance academic exchange in the area of venous disease diagnosis and treatment in China, facilitate the translation of clinical and scientific research achievements, and improve the overall quality of care, the “3rd Annual Academic Conference of the Professional Committee of Venous Diseases, China Association for Promotion of Health Science and Technology”, hosted by the China Association for Promotion of Health Science and Technology and the Professional Committee of Venous Diseases of the China Association for Promotion of Health Science and Technology, and organized by Sir Run Run Shaw Hospital, Zhejiang University School of Medicine and Beijing Luhe Hospital, Capital Medical University, will be held from October 9–11, 2026 in Hangzhou, Zhejiang Province.

### Conference Date

October 9–11, 2026

### Venue

Ruili Jianghehui Hotel, Hangzhou, Zhejiang Province

### Hosts

China Association for Promotion of Health Science and Technology

Professional Committee of Venous Diseases,  
China Association for Promotion of Health Science and Technology

### Organizers

Sir Run Run Shaw Hospital, Zhejiang University School of Medicine

Beijing Luhe Hospital, Capital Medical University
